API	ECMAScript 5 / ECMAScript 6
mongoDB	mongoose

## Projects

---

<https://github.com/diinnaamrr/ecommerce> 

- its an ecommerce app allows users to shopping and make order,By using Node.js and MongoDB,mongoose,Stripe

<https://github.com/diinnaamrr/saraha-app> 

- allows users to send anonymous messages securely,By using Node.js and MongoDB,mongoose

<https://github.com/diinnaamrr/Reviewey> 

- It's an app that helps users find genuine reviews for what they're looking for and allows them to share their experiences honestly by using node.js,mongodb,mongoose,socket.io

<https://acrobat.adobe.com/id/urn:aaid:sc:EU:6312a5f4-bd08-45c2-8299-c3299d8ce20d> 

- THIS IS EERD-Uber

Contributed to design and implement a database that mimicked the functionality of the Uber app. I analyzed the app, designed the EERD , and mapped out entity relationships. I also created the necessary tables in the database and developed five advanced queries for efficient data retrieval. My involvement encompassed design work, entity analysis, database implementation, and the development of advanced queries to support data analysis and insights. The database was created in Microsoft SQL Server DBMS.
