Summary

Am backend Dev started with PHP less than 1 years ago , I had my first training at ipda3.tech company with eng Abdullah Ibn Farouk whom im gonna make him as a reference . Then after native life I decided to choose a framework to work with and it was laravel . Laravel combines the simplicity and accuracy and time less coding and has a great community plus very very well documentation . I keep learning each day. Am not afraid to enter new challenges, to learn new techs , to prove that I deserve a chance.
